

2025

Introduction

Kumaraguru Institutions is a multi-campus educational institution in Tamil Nadu, South India, offering undergraduate, postgraduate, and research programs in Engineering, Technology, Management, Agriculture, Liberal Arts, and Science. Guided by its motto, "Character is Life," the institution is committed to academic excellence, holistic development, and nurturing responsible individuals with integrity and purpose. Through experiential learning, innovative research, and strong community engagement, Kumaraguru fosters a culture of inquiry and social responsibility, empowering students to address real-world challenges and contribute meaningfully to society.

Microcosm is a long-term, campus-wide environmental sustainability initiative at Kumaraguru Institutions that aims to transform the institution into a model of ecological

Introduction

Kumaraguru Institutions recognize the imperative to address climate change and integrate environmental sustainability into campus operations. This report encapsulates our Greenhouse Gas (GHG) inventory, providing a transparent account of our carbon footprint and resource utilization.

The scope of this report covers all major operational aspects, including energy consumption, transportation, and direct emissions from stationary sources. By quantifying these impacts, we lay the groundwork for targeted reduction strategies and continuous improvement.

Strategic Objectives

- Establish a robust baseline for GHG emissions and energy consumption.
- Identify key emission hotspots to prioritize mitigation interventions.
- Monitor the effectiveness of ongoing sustainability initiatives, such as renewable energy integration.
- Foster a culture of environmental stewardship among students, faculty, and staff.

KUMARAGURU
Institutions

High-level overview of carbon performance for Carbon Emissions Report - 2025.

Highlights

Performance Overview EMISSION PROFILE

During this reporting period, the campus generated 1753.80 tCO₂e of gross carbon emissions. Through our renewable energy initiatives, we successfully avoided 2452.44 tCO₂e, resulting in a net carbon impact of -698.64 tCO₂e. We remain committed to our long-term decarbonization pathway.

STRATEGIC RECOMMENDATIONS

- Accelerate the transition of internal campus mobility to Electric Vehicles (EVs) to reduce Scope 1 transport emissions.
- Expand rooftop solar capacity to push the renewable energy mix beyond the current baseline.
- Implement automated BMS (Building Management Systems) for high-load commercial blocks to optimize HVAC consumption.

Direct Emissions Overview

Scope 1 emissions generated 389.11 tCO₂e. Transport remains the dominant emission source in this category. Overall Scope 1 emissions decreased by 0% compared to the previous period.

EMISSION PROFILE

Transport Deep Dive

Transport emissions decreased by 0%. Continued fleet optimization is contributing to this reduction.

Scope 2 Story

KUMARAGURU
Institutions

Indirect Emissions Overview

Grid electricity consumption accounted for 1364.69 tCO₂e. This represents 77.8% of total gross emissions. Scope 2 emissions fell by 0%. Continuous efforts in optimizing HVAC and lighting systems will help to reduce this footprint.

EMISSION PROFILE

Renewable Impact

Total GHG Emissions

Renewable energy integration contributed 3373368.00 kWh, offsetting approximately 2452.44 tCO₂e of potential emissions. Our current renewable share stands at 64.2%.

The comparison table above illustrates our performance trajectory against the previous baseline. Reductions in total emissions are primarily driven by continuous optimization in energy usage and sustained renewable integration.

ENERGY INDICATORS

Methodology

KUMARAGURU
Institutions

Purpose of the Report

Highlights

This report presents the Greenhouse Gas (GHG) emissions inventory for Kumaraguru Institutions for the reporting period, compiled in accordance with ISO 14064-1:2018. The objective of this inventory is to measure and disclose the institution's GHG emissions, and provide reliable data to support future emissions reduction strategies.

EMISSION PROFILE

GHG Quantification Approach

The inventory has been developed using an activity-based quantification approach. Emissions were calculated by multiplying activity data (e.g., fuel consumption, electricity consumption) with appropriate emission factors derived from recognized national and international sources (IPCC, CEA, DEFRA).

Total GHG Emissions

1912.76

tCO₂e

Emissions
(Electricity)

1364.7
tCO₂e

Organizational Boundary

The organizational boundary has been defined using the operational control approach. All facilities and operations over which Kumaraguru Institutions has operational control are included. Scope 3 emissions have been assessed at a screening level but are excluded from quantitative reporting due to the unavailability of consolidated data.

Emissions (IPCC
Canteen)

100.00
tCO₂e

Global Warming Potential (GWP)

ENERGY INDICATORS

All greenhouse gases were converted into carbon dioxide equivalent (CO₂e) using Global Warming Potential (GWP) values from the IPCC Sixth Assessment framework.

Conclusion

This Greenhouse Gas (GHG) inventory enhances the understanding of emission sources within campus operations and provides a foundation for tracking environmental performance and identifying opportunities for energy efficiency and emission reduction. The institution intends to progressively improve data quality, expand emission coverage, and integrate climate considerations into operational decision-making.
